# **Calibration Kits**

Copper Mountain Technologies offers calibration kits and Automatic Calibration Modules (ACMs) in multiple configurations from DC to 110 GHz, ensuring accurate testing with our VNAs.

# **CMT Automatic Calibration Modules**

Copper Mountain Technologies' Automatic Calibration Modules (ACMs) are designed for n-port calibrations of vector network analyzers (VNA) produced by Copper Mountain Technologies.

Copper Mountain Technologies' VNAs have a built-in function of one-touch automatic calibration performed with these ACMs. The ACM calibrates the VNA in fully automatic mode through the built-in functions of the analyzer software. The ACM switches to the impedance states one by one in the process of calibration. The VNA calibration coefficients are calculated using the measured S-parameters of the ACM impedance states and the data stored in the ACM memory.

## Advantages of Automatic Calibration

The ACM calibration offers the following advantages over traditional mechanical SOLT calibration:

- reduced number of connections (for example, full two-port calibration requires only one connection of the ACM to a VNA instead of 7 connections of mechanical standards)
- faster calibration procedure
- reduced risk of human error
- higher accuracy
- reduced wear on test port connectors

#### **User-Defined Characterization**

Besides factory characterization, the ACM memory can store up to three user characterizations. The user characterization allows use of the ACM with adapters and other fixtures connected.

#### Attenuator state

The ACM features an additional attenuator state, which is not used in calibration. The attenuator is applied in confidence check of the performed calibration using a specific VNA function, which compares the measured S-parameters of the attenuator and the ACM memory data.

## Thermal Compensation

Thermal compensation is used to enhance ACM calibration accuracy in the entire range of the operating temperatures of 64°F to 82°F (18°C to 28°C). It is a software function of correcting the ACM characterization data for ambient temperature variations. Temperature dependence of S-parameters of each ACM is determined at the factory and saved into the device memory.

# ACM4509 Automatic Calibration Module<sup>1</sup>

The ACM contains four RF connectors for connection to VNA test ports, Mini-USB control port, several different transmission and reflection impedance states and electronic changeover switches. ACM4509 has 16 reflection states (four for each port) and Thru. The precise S-parameters of the calibration impedance states are stored in the ACM memory (factory characterization data).

#### Measurement Range

| Impedance                         | 50 Ohm           |

| 8 GHz - 26.5 GHz          | ≥ 30 dB   |

## Coefficients

| Open  | $C_0 = -17.5 \times 10^{-15} \text{ F}$     |           |
|-------|---|-----------|
|       | $C_1 = -2000 \times 10^{-27} \text{ F/Hz}$  |           |
|       | $C_2 = 140 \times 10^{-36} \text{ F/Hz}^2$  |           |
|       | $C_3 = -2.7 \times 10^{-45} \text{ F/Hz}^3$ |           |
|       | Electrical (Offset) delay                   | 33.356 ps |
|       | Electrical (Offset) loss                    | 2.2 GΩ/s  |
| Short | $L_0 = -44 \times 10^{-12} \text{ H}$       |           |
|       | $L_1 = 3700 \times 10^{-24} \text{ H/Hz}$   |           |
|       | $L_2 = -250 \times 10^{-33} \text{ H/Hz}^2$ |           |
|       | $L_3 = 5 \times 10^{-42} \text{ H/Hz}^3$    |           |
|       | Electrical (Offset) delay                   | 33.356 ps |
|       | Electrical (Offset) loss                    | 2.36 GΩ/s |
| Load  | Electrical (Offset) delay                   | 0.0 ps    |
|       | Electrical (Offset) loss                    | 0.0 GΩ/s  |
| Thru  | Electrical (Offset) delay                   | 84.058 ps |
|       | Electrical (Offset) loss                    | 2.51 GΩ/s |

## **Environmental Data**

| Operating temperature <sup>3</sup> | 20°C to 26°C   |  |
|------------------------------------|----------------|--|
| Storage temperature 4              | -40°C to +85°C |  |

<sup>&</sup>lt;sup>1</sup> The nominal phase is defined by the Offset Delay, the Offset Loss and the Fringing Capacitances. <sup>2</sup> The nominal phase is defined by the Offset Delay, the Offset Loss and the Short Inductance. <sup>3</sup> Temperature range over which these specifications are valid. <sup>4</sup> This range is underneath and above the operating temperature range, within the calibration kit is fully functional and could be used without damage.

<sup>\*</sup>Specifications are subject to change without notice.

# F7511 Calibration Kit

The F7511 is a  $75\Omega$ , 3 GHz, F-type calibration kit containing F-male and F-female open, short, load and an F-female adapter.

# Mechanical Calibration Kits:

Technology is supposed to move. It's supposed to change and update and progress. It's not meant to sit stagnant year after year simply because that's how things have always been done.

The engineers at Copper Mountain Technologies are creative problem solvers. They know the people using VNAs don't just need one giant machine in a lab. They know that VNAs are needed in the field, requiring portability and flexibility. Data needs to be quickly transferred, and a test setup needs to be easily automated and recalled for various applications. The engineers at Copper Mountain Technologies are rethinking the way VNAs are developed and used.

Copper Mountain Technologies' VNAs are designed to work with the Windows or Linux PC you already use via USB interface. After installing the test software, you have a top-quality VNA at a fraction of the cost of a traditional analyzer. The result is a faster, more effective test process that fits into the modern workspace. This is the creativity that makes Copper Mountain Technologies stand out above the crowd.

We're creative. We're problem solvers.
